

RAPID BEET

QUICK-SOAKING BEET PULP

Rapid Beet is a low sugar, low starch source of non-heating energy. It is suitable for horses and ponies needing a high-fibre feed, as well supporting optimum water intake.

Rapid Beet is a quick soaking beet pulp which is high in digestible fibre. It provides a source of slow-release, non-heating energy. Unmolassed beet pulp is naturally low in sugar (5%) and starch (1.5%) making it a suitable product for horses that require a low starch ration. It is also highly palatable and can be added to any feed to increase overall fibre intake. It will also help to maintain optimal hydration status, by creating 'water reserves,' in the gut that can be drawn upon during exercise. It is also an excellent natural prebiotic and will support a healthy digestive tract. Rapid Beet is a quick-soaking beet pulp which is suitable to be fed year-round.

Feeding requirements

Mix 1 part of Saracen Rapid Beet to 5 parts of water by weight; e.g. 200 g of Saracen Rapid Beet would require 1 litre of water. Allow the product to soak for 10 minutes (using hot water will reduce soaking time to 5 minutes). We advise only making enough Rapid Beet for each meal.

Nutritional Info:

- Crude Fibre - 16.5%
- Sugar - 5.0%
- Starch - 1.5%

MIXING RATIO

SOAKING GUIDE

1 part Rapid Beet: 5 parts water by weight
200 g dry Rapid Beet + 1 litre of water

10 min cold water | 5 min hot water

Feeding rate notes

Feed immediately or store in a cool place (ideally below 10°C) for no more than 24 hours. Feed up to a maximum of 0.5 kg dry weight per 100 kg of bodyweight. Never feed Rapid Beet dry.

Pack size

20 kg

Ingredients

Unmolassed sugar beet pulp.
